PROCESSING DATA

- The material, processing and mold or master-model temperature shall be between 18 °C and 25 °C.
- Make sure the mold or master model is clean, dry, dust and grease free.
- Prior to use check the material for homogeneity and crystallization.
- After prolonged storage at low temperature, crystallization of components may occur. This process can be easily reversed by heating the affected component to a maximum of 70 °C until the crystals have disappeared.
- Setting may be observed on the polyol. In that case, it is necessary to mix the polyol part until both color and aspect become homogeneous. This is not harmful for the product quality.
- Both parts have to be mixed at a temperature higher than 18 °C according to the mixing ratio indicated on the technical data sheet.
- Containers must be closed tightly immediately after use to prevent moisture ingress.
- Once opened the product shall be used up as soon as possible.
